Plaza Viva stands for reliable sun and rain protection on the patio. It is incredibly wind-resistant and integrates subtly into the overall look of the house. Not forgetting its practical use on facades that don’t have enough load-bearing capacity to mount a folding arm awning. Technical innovations such as the optional lowerable telescopic post, the OptiStretch version, integrated LED lighting and gear handle operated Valance Plus leave almost nothing to be desired.
Compensation joint:
Reduces the load on the entire construction when lowering the post

Wall bracket with floating bearings:
Also reduces the load on the awning when lowering the post

Telescopic post:
Can be lowered using the gear handle to drain rain off reliably

Integrated LED lighting:
Moody patio lighting

No visible fixings:
Elegant and slimline design

3-part rain protection system
Plaza Viva Highlights

Service opening:
Easier access to the drive and control components with BiConnect

New flat rope:
Quiet and extremely tear-resistant

Plaza Viva OptiStretch:
Held captive on 4 sides
no light gap

Plaza Viva Stretch:
Held captive on 2 sides
cost effective

Update
Plaza Viva  

Benefits

Large surface protection from the sun – thanks to sturdy aluminium posts

The Plaza Viva stands on solid posts. Making it suitable sun protection for large terraces and offering reliable protection against surging winds.

• For larger dimensions up to 30 m²
• Can also be installed on difficult and insulated facades due to reduced load acting on the fixings in the wall brackets
• Wind-resistant up to wind force 6 on the Beaufort scale
• Elegant design, almost no visible screws

Telescopic post for rain to drain off reliably (optional)

The optional telescopic post can be really easily fully lowered on one side using the gear handle thus ensuring that rain drains off easily with a pitch awning of 4° or more.

• Just one telescopic post possible per construction
• Reliable rain protection
• No pooling

Please observe the important details in the Plaza Viva telescopic post section.

Compensation joint and floating bearing

The combination of a compensation joint and wall bracket with floating bearings reduces the load on the entire construction when the awning is lowered using the gear handle.

• Rain drains off reliably (no danger of pooling)

Clever Stretch and OptiStretch versions

**Plaza Viva Stretch:** the well positioned and even fabric creates a cozy atmosphere.

• **Stretch:** held captive on 2 sides, cost effective solution, easy to install

**Plaza Viva OptiStretch:** completely closed all round, ensures a well tensioned fabric without any hanging fabric edges on the side. In very large constructions, it reduces the central sagging of the fabric during extension and retraction.

• **OptiStretch:** held captive on 4 sides, no light gap
Plaza Viva Benefits

Reliable tension system – with new quiet flat rope

The tried and tested clamping system is used with the Plaza Viva with a new flat and at the same time tear-resistant rope. The rope winds up extremely quietly over itself instead of side by side. This prevents the rope from bouncing.

• Long-lasting equalised fabric tautness with pulley block technology
• The flat rope is quiet and tear-resistant, it prevents the rope from twisting and bouncing and does not fray on the sides

Service opening – convenient access

The opening in the cassette offers easy access to the motor input with BiConnect.

• Easier access to components
• The programming of the drive’s end positions is made easier by the service opening
• Decoupling of the wind sensors during maintenance

HighPower LED spotlights – for an amazingly beautiful atmosphere

The LED spotlights integrated into the cassette produce atmospheric lighting on the patio.

• 30,000 hours of LED lighting with minimal energy consumption
• LED infinitely dimmable using weinor’s BiConnect control

Valance Plus – vertical privacy and sun protection

The Valance Plus is elegantly integrated into the Plaza Viva’s front profile. It provides privacy and glare protection even with a low-lying sun.

• Can only be operated by gear handle up to 2100 mm
• Patented OptiFlow-System® to keep fabric ideally positioned and to close the bottom rail safely
• Valance Plus may only be extended and retracted when using a telescopic post if the telescopic post is cranked right up to the top
• Can be combined optionally with the LED Design light bar

- standard  ○ optional  — unavailable
LED lighting – 30,000 hours of lighting with extremely low energy consumption

The select high-power LED components are patented and represent the very best in weinor quality:

- Integrated into the cassette
- Atmospheric light thanks to special glass lenses
- Lighting remains on even when awning is retracted
- Highly energy-efficient
- Operating life of 30,000 hours
- Infinitely dimmable when used with BiConnect radio control
- Easy to service: simply replace individual LED lights without uninstalling the awning

Telescopic post (optional)
The optional telescopic post can be really easily lowered on one side using the gear handle providing an awning pitch of 4° and fully cranked down post so that rain drains off reliably.

Important information
• The telescopic post should ideally always be moved into the highest or lowest position as it can only be locked in place there. If it is moved to a position in between it may lower of its own accord because there is no locking in place.
• The construction may only be extended and retracted if the telescopic post is right up the top
• The mounting of telescopic posts on both sides is not recommended as this would cancel out the benefit. It would then only be guaranteed that rain would drain off reliably from a pitch of 14° again.
• 2 telescopic posts are also unsuitable for protection against the low-lying sun as lowering between 150 to 350 mm does not offer sufficient protection. The Valance Plus is ideal for this.

Controlled draining with lowered post. If the post is not lowered, the water may collect on the Plaza Viva leading to pooling.
The wall sealing profile conceals the gap between the wall and the cassette. This is a useful option if there is no on-site protection above the cassette, e.g. a roof overhang.

Paravento (optional)

The Paravento side screen is the perfect complement to the Plaza Viva pergola awning.
- Protects against cool side winds
- Shelters from prying eyes
- Heights of up to 250 cm and projections of up to 400 cm
- Easy to retrofit by attaching it to the Plaza Viva posts, a separate pole or a wall

Compensation joint and floating bearing

When lowering the top part of the post using the gear handle, it reduces the load on the construction and it remains inherently stable. The wall bracket with floating bearing and compensation joint on the upper part of the post ensure that the entire awning adapts perfectly to the pitch.
Fixed post
The fixed post’s standard length is 2,600 mm.
On request the fixed post’s bottom sections can be supplied extra-long (e.g. for setting in concrete)
The post’s recess measurement is min. 150 mm, max. 25% of the projection, max. 1,000 mm
The inside post (50 x 50 mm) is always approx. 400 mm long.

Update
Plaza Viva Valance Plus

Valance Plus – more privacy thanks to vertical privacy and sun screen (optional)

The gear handle operated vertical sun protection is integrated elegantly into the Plaza Viva/LED front profile.
• Glare protection and privacy shield up to a maximum valance height of 210 cm
• Only possible with gear drive, only extend and retract the Valance Plus with the telescopic post cranked up
• Valance Plus use up to a Plaza Viva pitch of 4° to 20°.
• Can be combined optionally with the LED Design light bar
• Valance Plus cannot be retrofitted
• With Valance Plus, the fabric support roller is always mounted above the side channel

Please note: the Valance Plus should be extended and retracted slowly to guarantee that the fabric winds up neatly.

* Max. roll widths are stipulated in the collection brochure

Please note: On the gear-driven Valance Plus, it is possible that the Valance Plus bottom rail will close unevenly.
Installation location for receiver, power supply pack and further electrical components
The receiver is accommodated in the cassette. The faceplate (not shown here) can be really easily opened for servicing purposes. The receiver is then easily accessible.

Note: Plaza Viva Valance Plus is only available with gear drive and cannot be combined with the LED version.

We do not recommend any sensors when using telescopic posts and/or the Valance Plus. Nevertheless, if sensors are used, the Valance Plus or telescopic posts may only be used if the sensors are switched to manual operation.

- Only available with gear drive

**Note:**

Please see the “Accessories” technical brochure for further details regarding the drive and control.

Some options are subject to a surcharge. For prices, please refer to the weinor awnings price list.
Power supply pack for option LED (hard wired)

The power supply pack provides the voltage and current intensity required to operate the LED. It is only necessary for the LED option.

Installation location for power supply pack for option LED

The power supply pack is located in the cassette and is easily accessible. The installation location is not required for drives without LED options and remains empty.
The Plaza Viva Stretch and OptiStretch consist of identical frame constructions and use the same tried and tested weinor clamping system with a new flat rope that winds up extremely quietly. The fabric guide is the difference between the two systems. In the Stretch System, the fabric is tensioned between the fabric roller bearing and the front profile in the ascending direction, while in the OptiStretch, the fabric is additionally guided sideways in the guide rail. The OptiStretch thus achieves a significantly higher degree of fabric tensioning.

**The Stretch system**
- Fabric gap max. 25 cm on each side
- Held captive on 2 sides
- Cost-effective solution
- Easy installation
- Fabric gap up to 25 mm
- Good fabric tension also for Soltis® fabrics

**The OptiStretch system**
- No fabric gap
- Held captive on 4 sides
- No edges hanging down the sides
- No light gap
- Soltis® fabrics are not available for the OptiStretch version
Plaza Viva Stretch/OptiStretch

Fabric tensioning technology Rope clamping system

Tension system with 2 tensioned springs (number of springs depends on the projection and width)

- Fabric roller bearing
- Rope drum
- Pulley block D39
- Tensioning rope
- Carriage
- Carriage roller D30.7/22
- D39 pulley block with rope holder
- Carriage roller D30.5/11.5

Tension system with 1 tensioned spring (depends on projection and length of spring)

- Tensioning rope
- Spring cover
- Tension spring
- Rope clamp with braided sleeving
- Pulley block D39
- Preloading tail
A fabric support roller is used at the bottom as standard with a projection > 4000 mm. With locations exposed to winds we recommend using additional fabric roller supports (option). The fabric support rollers can be retrofitted at any time without too much effort.

With the Valance Plus option the fabric support roller (from a projection >4000 mm) is fitted at the top as standard.
The maximum size of a Plaza Viva is 6,000 x 5,000 mm. Wider systems can be extended easily to become a multi-section unit by placing single-unit systems next to each other, the total width for multi-section units is 12 meters, max. 50 m² fabric area (see table below).

The single-unit systems installed next to each other have a separate motor drive and can thus be retracted and extended separately. The telescopic post can only be used on the right and left but not in the centre.

---

Multi-section unit with telescopic post on right and left

Sealing multi-section units

2x glazing tape 12 x 3 mm is stuck, as shown between the units along the entire length and sealed on site.
On request, various offset versions can be produced (e.g. wall offset).

The gap (10-50 mm) between the wall offset and unit can optionally be covered with a bracket.

The gap between the wall and cassette can also optionally be covered with a wall sealing profile.

Legend:
UKW = wall bracket bottom edge
Top view of Plaza Viva Stretch

The fabric gap at the side is up to 25 mm in the Stretch version, depending on the cassette width and the projection.

There is no fabric gap in the OptiStretch version.

Delta (Δ) in mm (rounded figures)

Recess measurement

The posts can be recessed by up to approx. 25% of the projection and a maximum of 1000 mm. Installation tolerances are specified made-to-order on the installation sheet.

Important:
- Plaza Viva with fixed post: there is no risk of pooling from a pitch of 14°
- Plaza Viva with telescopic post: there is no risk of pooling from a pitch of 4° and with fully lowered post
- The Plaza Viva with fixed posts complies with rain class 2 from a pitch of 14°
- With telescopic posts it already complies with rain class 2 from a pitch of 4° with fully lowered telescopic post

The Plaza Viva planning aid
Using the clever planning aid you can easily calculate the installation height, pitch and delta value for the height difference between the wall bracket bottom edge and front profile head clearance height by specifying the projection or patio depth you want.

Legend:
- B = projection
- α = angle of pitch (roof pitch)
- Ukw = wall bracket bottom edge
- Δ = height difference (Ukw – DH)
- T = patio depth
- Ueg = straight overhang
- DH = head clearance height

Mounting plate for rafter bracket 294 x 80 x 15 mm

Installation on insulated facades using Fischer Thermax 12/16

The Thermax 12/16 stand-off installation system from Fischer is suitable for insulated facades as it allows for secure fixing.
Plaza Viva Installation

**Installation with stand off bracket (special bracket)**

80 to 300 mm gaps can be bridged using the stand off bracket.

Plaza Viva with stand off bracket, e.g. to overcome a soil pipe

Stand off bracket

Stand off bracket with wall bracket

**Installation on roof using a stilt (special bracket)**

This special bracket is used for example under roof tiles. The longer plate is mounted under the roof tiles and sealed again on site. This mounting holes are drilled on site after determining the position.

Please note: We need the house roof angle and length of the round pole (stilt) to install the stilt.

Use of stilt

Three-piece special bracket (mounting plate, stilt, wall bracket)

Use for installation on a roof

\[
X = \text{rafter thickness} \\
Y = \text{stilt adjustment range} = \left(900 - \text{rafter distance} - 2x\right)/2 \\
Z = \text{height of roof structure (tiles etc.)}
\]
Plaza Viva Installation

Installation with angle bracket (special bracket)

The Plaza Viva can also be mounted on a lateral wall, niche or next to a Terrazza using the 100 x 50 x 5 x 120 mm wall-mount angle bracket.

Installation of Plaza Viva laterally on a wall or in a niche

100 x 50 x 5 x 120 mm wall-mount angle bracket

The Plaza Viva can also be mounted on a lateral wall, niche or next to a Terrazza using the 100 x 50 x 5 x 120 mm wall-mount angle bracket.
**Plaza Viva Installation**

### Other application examples

**Plaza Viva installation beyond a patio roof and/or conservatory**

The Plaza Viva is installed on the wall on site using wall brackets and the projection is extended (the head clearance height must be noted for this). With installation without telescopic posts, the Plaza Viva can also be fixed onto the conservatory using support brackets.

**Installation on a wall (without posts)**

If there is a wall on the opposite side, it is possible to mount the Plaza Viva onto the wall without posts using adjustable support brackets.

**Duofix supporting structure**

Two Plaza Viva can be mounted on our Duofix supporting structure to achieve an even larger area of sun shade.
Plaza Viva Installation

Post installation

Standard/adjustable post plates

Standard post plate (installation on even ground)

Adjustable post plate/for Krinner screw foundation systems (installation on uneven ground)

Cover cap for post plate

Post foundation planning

**Note**
The size of the foundation depends on the quality of the ground, the acting loads and the climate conditions (frost depth). The size specified here assumes unfavourable conditions. A smaller foundation may also be adequate depending on the structural conditions.
Note:
- The weighted base for posts has a size of approx. 500 x 500 mm, the height is approx. 560 mm.
- As a weighting it is recommended to use 48 stones in size 200 x 100 x 60 mm. This corresponds to a weight of about 125 kg.
- The weighted base for posts is not suitable for use on wind-exposed places.
Post installation

Post fixation on concrete floor slabs 1
The standard configuration is the installation of the Plaza Viva with post plates on a given concrete floor. The finished cut length of the post is always indicated on the assembly sheet.

Bucket foundation 2
Posts are securely fitted into a strong non moving base. The concrete is poured and set at the end of the installation, which simplifies the alignment of the posts.

Deep-seated foundation 3
The easy and flexible screw attachment on a 700 (w) x 800 (h) x 700 (d) mm screw foundation is carried out like the standard fixation (item 1). The reference height for the crank position as well as for the post height is always TEFF.

Screw foundation 4
When fixing the posts into soil/earth they are an alternative to conventional foundation fixing. The post length as mentioned on the mounting sheet is increased by the floor level (X).

Mounting on wall 6
When the post is mounted on a wall, the height of the post is reduced by the height of the wall (Y).

Weighted base for posts 7
If it is not possible to fix the post into the ground then the base option can be used. For example a public/pedestrian area, indoor installation, or on a balcony.

TEFF: Top edge of finished floor
X: Floor recess
Y: Height wall
